

FRAX Series

Sweep frequency response analysers

Megger[®]

- Highest accuracy in the industry.
- High dynamic range to cover all your testing needs
- Fulfills international standards for SFRA measurements
- Advanced analysis and decision support built into the software. FRAX 150 with built in PC and touchscreen
- Imports data from other FRA test sets
- Wireless communication (FRAX 101)
- Battery operated (optional FRAX 99 and FRAX 101)
- Continuity control of ground connections (FRAX 101 and 150)

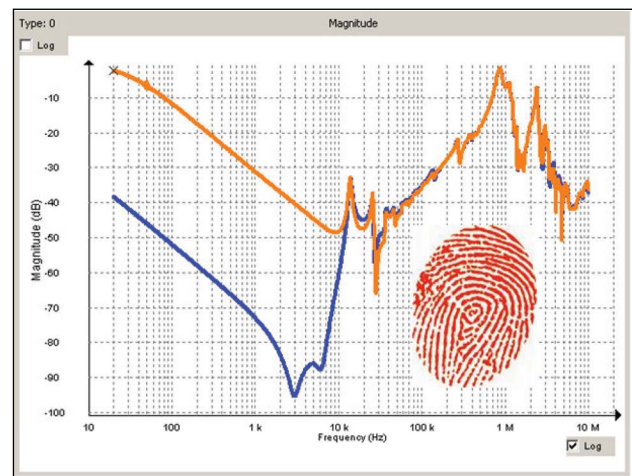

DESCRIPTION

Power transformers are some of the most vital components in today's transmission and distribution infrastructure. Transformer failures cost enormous amounts of money in unexpected outages and unscheduled maintenance. It is important to avoid these failures and make testing and diagnostics reliable and efficient.

The FRAX series of sweep frequency response analyzers (SFRA) detects mechanical and electrical changes of the core and winding assembly of power transformers. Major utilities and service companies have used the FRA method for more than a decade and the method is covered in international standards. The measurement is easy to perform and will capture a unique fingerprint of the transformer. The measurement result is compared to a reference fingerprint and gives a direct answer if the mechanical parts of the transformer are unchanged or not. Deviations indicate geometrical and/or electrical changes within the transformer.

FRAX detects problems such as:

- Winding deformations and displacements
- Shorted turns and open windings
- Broken clamping structures
- Core connection problems
- Partial winding collapse
- Faulty core grounds
- Core movements

Collecting fingerprint data using Frequency Response Analysis (FRA) is an easy way to detect electro-mechanical problems in power transformers and an investment that will save time and money.

Sweep frequency response analysers

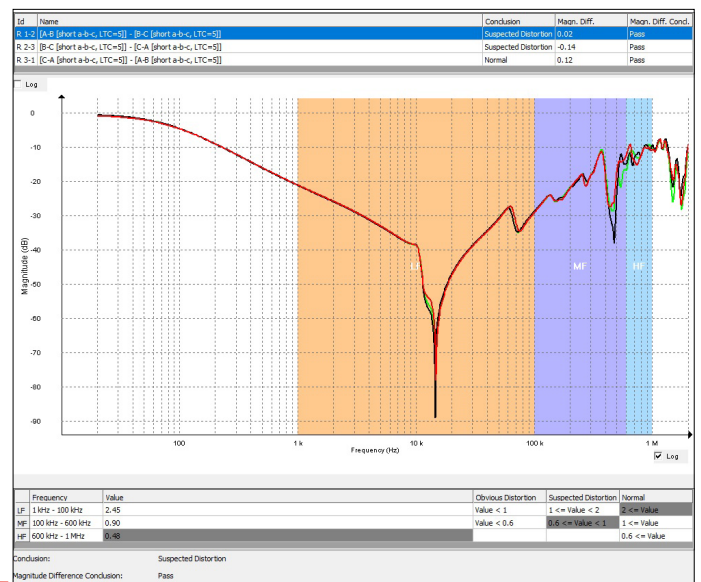

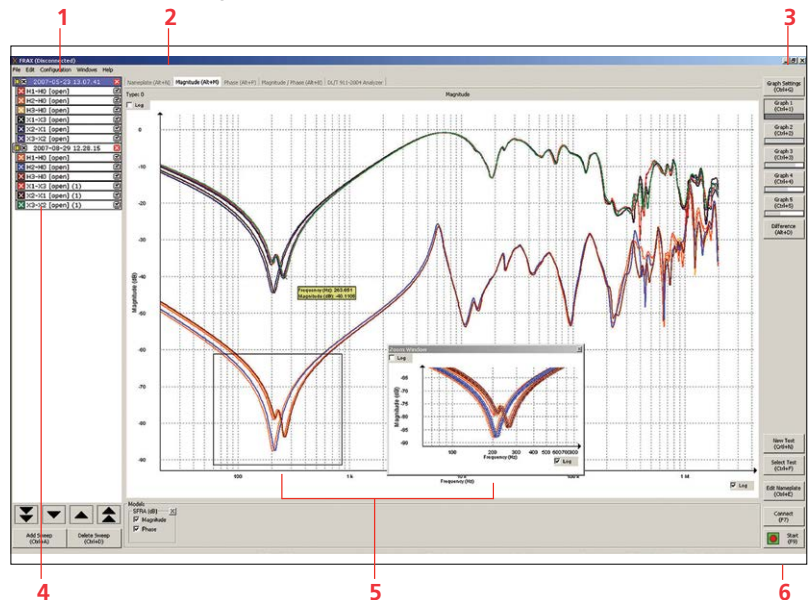

BENEFITS

- Compact and rugged design.
- Guaranteed repeatability by using superior cabling technology and standardized signal cable grounding technique (IEC 60076-18, Method 1).
- Fulfills international standards for Sweep Frequency Response Analysis (SFRA) measurements (IEC 60076-18, IEEE C57.149 etc).
- Dynamic range and accuracy to detect even the most subtle electro-mechanical changes within the transformer to be detected.
- Advanced analysis and support software tools allows for sound decision making with regard to further diagnostics analysis and/or transformer disposition.
- Built-in PC with touchscreen (FRAX 150).

FEATURES

1. Test object browser – Unlimited number of tests and sweeps. Full user control.
2. Quick select tabs – Quickly change presentation view for different perspectives and analysis tools.
3. Quick graph buttons – Programmable graph setting lets you change views quickly and easily.
4. Sweep/curve settings – Every sweep can be individually turned on or off, change color, thickness and position.
5. Dynamic zoom – Zoom in and move your focus to any part of the curve.
6. Operation buttons – All essential functions at your fingertips; select with mouse, function keys or touch screen.
7. Automated analysis compares two curves using an algorithm that compare amplitude as well as frequency shift and lets you know if the difference is severe, obvious or light.

Decision support is provided by using a built-in analysis tool based on correlation analysis.

INCLUDED ACCESSORIES

Included accessories shown above: Mains cable, ground cable, (2) ground braid sets, (2) earth/ground braid leads (insulated), (2) C-clamps, generator cable, measure cable, field test box, nylon accessory pouch, (2) earth/ground braids with clamp, and canvas carrying bag for test leads.

FTB101

Several international FRA guides recommend verification integrity of cable and instrument before and after a test using a test circuit with a known FRA response supplied by the equipment manufacturer. FRAX comes with a field test box FTB101 as a standard accessory and allows the user to perform this important validation in the field at any time and secure measurement quality.

OPTIONAL ACCESSORIES

FDB101

The FRAX demo box FDB101 is a transformer kit that can be used for in-house training and demonstrations. The small transformer is a single-phase unit with capability to simulate normal as well as fault conditions. Open as well as shorted measurements can be performed. The unit also contains two test impedances, one of them the same as used in the FTB101 field test box.
